ance Notes on Codes and Abbreviations" appearing at the begin-
ning of each regular issue of the PCT Gazette.

(54) Title: A BUILDING CONSTRUCTION

(57) Abstract: As per figure 4, a building construction having a main portion 1, a roof portion 2, and a floor portion 3. The construction may be formed in the shape of a box-like freight container in which the roof portion 2 and/or the floor portion 3 provide(s) structural integrity. The structural integrity is such that the construction can be picked up by a crane, and/or arranged in a freight vehicle with a normally loaded freight container on top of it, either case without causing structural damage. The building construction can be assembled by swinging the roof portion 2 out from the main portion, and by swinging the floor portion 3 out from the main portion, not necessarily in that order, but in each case by way of pivot connections 4, such that the roof and floor portions become at least part of the roof and floor of the building construction respectively when the building construction is installed on site.
